PROMPT TO PROFIT ADVANCED

Production Curriculum for Web + Mobile

A 4-week execution-first program where students install a professional AI coding workflow, build a monetizable web app, extend it to mobile, and ship to public stores.

DURATION	BUILD SCOPE	OUTCOME
4 Weeks	**Web + Mobile**	**Launch Ready**

Move beyond simple static websites. Learn how to use professional tools - VS Code and AI coding assistants, to build, debug, and deploy fully functional web and mobile applications. No computer science degree required.

Week-by-Week Curriculum

WEEK 1

Production Environment + AI Workflow Setup

Set up your complete build environment for web and mobile, then validate an AI-assisted workflow that can safely edit, run, and fix your app.

- Install and configure Node, Git, IDE, mobile SDKs, simulator/emulator.
- Set up project architecture for web + mobile + shared backend.
- Configure Codex workflow for implementation, review, and safe refactors.
- Run a full setup validation on local web and mobile builds.

Deliverable: Production-ready setup checklist passed.

WEEK 2

Project Selection + Web App MVP Build

Choose a high-potential project, define clear requirements, and build a real web application with authentication, data, and core business logic.

- Select app concept based on pain point, speed to MVP, and monetization.
- Define personas, user stories, acceptance criteria, and MVP scope.
- Build core web flows, auth, and persistent data models.
- Add testing, analytics events, and production-oriented error handling.

Deliverable: Working web MVP with real user flow.

WEEK 3

Mobile Client Extension

Extend the same product into a mobile experience by connecting a dedicated app client to your existing backend and polishing key user journeys.

- Set up mobile app architecture, navigation, and shared API integration.
- Build core screens: onboarding, auth, and primary in-app journey.
- Implement data fetching, caching, and resilient offline/loading states.
- Test on emulator/simulator and physical devices for release readiness.

Deliverable: Functional mobile app connected to backend.

WEEK 4

Deployment + Play Store + App Store Release

Launch your full product stack: deploy the web app and complete the full release workflow for Google Play and Apple App Store.

- Deploy web app/backend with production environment and domain setup.
- Prepare signed builds, release tracks, and required store listing assets.
- Submit through Play Console and App Store Connect workflows.
- Execute launch checklist, monitoring, and post-launch iteration plan.

Deliverable: Live web app + mobile app submitted/published.
